

## **GNDP Update to Examination**

### **Publication of the East of England Forecasting Model Update**

On 18<sup>th</sup> July Cambridgeshire County Council published an update to the East of England Forecasting Model.

The background to the model and its influence on the Joint Core Strategy is explained in para 10.1 of the Homes and Housing Topic Paper, SDJCS 14, (also available as TP12) and three runs of the model were attached as an appendix 4 to that paper. One of these runs (the Greater Norwich Spring 2012 baseline) was subsequently corrected and replaced by paper SDJCS 14.1.

In terms of table 1 of paper SDJCS 14 the new model run would add a further source of comparison of dwelling requirement figures into page 15 of the document. The July 2013 EEFM figure would be 32,300.

The relevant extract from the latest model run is attached. The model itself is available at:
